

The covariance layer: broad formal support, thin usable aperture

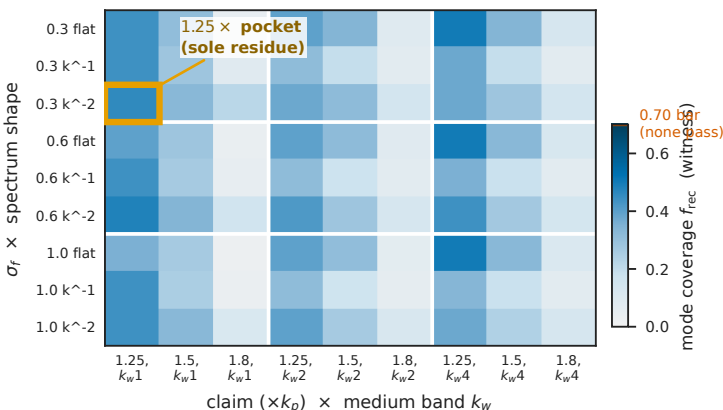

(a) spectral law: covariance crosses the mean wall

(b) the aperture is real (64×64)

(c) 81-cell Fisher atlas: REGION_EMPTY, 0/81 pass

(d) pocket branch

POCKET_ACHIEVED

blind lifted-GLS realized the predeclared 1.25 $\times$ pocket: one modest positive check (one reconstruction inset).

pocket: $f_{\text{rec}}(\text{nat})$ 0.79 $\cdot$ NRMSE 0.10 $\cdot$ $T_{\text{req}} \approx 197$
