

The covariance layer: broad formal support, thin usable aperture

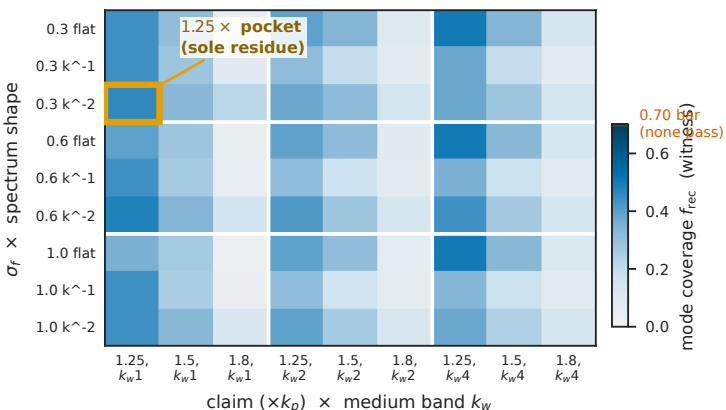

(a) spectral law: covariance crosses the mean wall

(b) the aperture is real (64×64)

(c) 81-cell Fisher atlas: REGION_EMPTY, 0/81 pass

(d) pocket branch

ESTIMATOR_GAP_PERSISTS

Fisher-feasible but the frozen blind reconstruction did not realize it — an estimator-reach gap, not a contradiction.

pocket: $f_{\text{rec}}(\text{nat}) 0.79 \cdot \text{NRMSE } 0.10 \cdot T_{\text{req}} \approx 197$
